# Tanmay Saxena

**QA Automation Engineer / SDET | Playwright, Appium | AI-Augmented Testing (MCP) | Mobile and IoT**

tanmaysaxena112@gmail.com | +91 9826671877 | Portfolio: itstanmaysaxena.github.io | LinkedIn: in/tanmay-saxena-4110061b4 | GitHub: itstanmaysaxena | Mumbai, India (open to remote)

## SUMMARY

QA automation engineer with 5 years of experience on web, mobile and IoT products, including all 5 years on Godrej's smart-lock apps. Builds Playwright (TypeScript) and Appium/WebdriverIO automation. Uses AI agents through the Model Context Protocol (Claude Code with Playwright and Figma MCP) on client projects, with a human approval step before anything is logged. Has tested a live GenAI assistant (Sophius, Aditya Birla Group) for AI-output quality, and built QA Factory, a personal multi-agent AI QA pipeline with seeded-fault calibration.

## HIGHLIGHTS

- **Zero production bugs:** launched all four Godrej smart-lock apps, built from scratch, under my testing.
- **About 50% shorter test cycle:** automated DTDC's repetitive regression with Playwright and spent the saved time on edge cases.
- **8 hours to minutes:** AI-agent exploratory testing (Claude Code, Playwright MCP) on CarbonX found 44 bugs (9 P1) and 5 security findings.
- **16/16 planted bugs caught:** QA Factory, my multi-agent AI QA pipeline, with 0 flaky tests out of 123.
- **Portfolio:** live app screens, a QA pipeline demo and a hands-on bug hunt at itstanmaysaxena.github.io.

## LIVE APPS TESTED

- **Godrej:** Advantis Smartlocks · Advantis GSL · Catus GSL Guest · Catus GSL Staff · Advantis Furniturelocks
- **Other:** Sophius AI · MyDTDC · Elivaas Owner · WAYA · Simple Connect · KODAK Photo Printer

## SKILLS

| | |
|---|---|
| **Automation** | Playwright (TypeScript, JavaScript), cross-browser testing, Appium (UiAutomator2, XCUITest), WebdriverIO, Mocha, Page Object Model, Allure |
| **AI in Testing** | Claude Code, Model Context Protocol (MCP), multi-agent test pipelines, LLM test-case generation, LLM-as-a-judge review, human-in-the-loop approval, custom Claude Code skills |
| **GenAI App Testing** | prompt-based testing of response quality (inappropriate and irrelevant answers), source links, document, image, video and database research modes |
| **Visual and Accessibility** | visual regression, design-versus-build (odiff, Tesseract OCR, Figma), axe-core WCAG 2.2 AA checks |
| **Mobile and IoT** | Android and iOS real devices, Flutter apps, BLE, firmware and OTA, hardware-software integration |
| **API, Data and Security** | Postman, REST and webhook validation, role-based access checks, Python data validation |
| **Quality Practice** | test strategy and planning, regression, UAT, exploratory, root-cause analysis and debugging, quality metrics, flaky-test reduction |
| **Tooling** | JavaScript, TypeScript, Node.js, Python (scripting), Git, GitHub, CI/CD with GitHub Actions (QA Factory), ClickUp |

## EXPERIENCE

### Senior QA Engineer | Binaryveda

Jul 2021 – Present

**Automation and AI testing**

- **Godrej Smart Locks:** built a proof-of-concept Appium and WebdriverIO framework (Page Object Model, Allure) for the Flutter lock app. The same page objects passed 5/5 smoke tests on an Android emulator and a real iPhone. Solved Flutter element-identifier and iOS code-signing blockers, and introduced a shift-left, Figma-based test-ID spec that developers follow before building screens.
- **Godrej Smart Locks:** built a visual-regression POC for design-versus-build (odiff pixel diff plus Tesseract OCR text matching) on a real iPhone, which caught a real text-prefill mismatch on the login screen.
- **Godrej Smart Locks:** built Claude Code skills that draft bug tickets with priority, environment, platform and firmware version, log time and write daily stand-ups. They post only after my approval.
- **CarbonX:** ran AI-driven exploratory testing of the client and admin portals with Claude Code and Playwright MCP. The first pass took minutes instead of about 8 hours by hand, and found 44 bugs (26 on the client portal, 9 of them P1; 18 on the admin portal) and 5 security findings, including missing role checks on an admin API. Cross-checked the results against the dev lead's 48-item list.
- **DTDC:** verified 19 change requests with Claude and Playwright, built a Playwright TypeScript suite for passport booking, and compared Figma with the live app through Figma MCP, finding copy drift and a missing navigation item. Built 8

Claude Code commands, including AI bug drafting that logs to ClickUp only after my approval.

- **Sophius (Aditya Birla Group GenAI assistant, 2024):** tested its AI research modes (video, image, chart, document and database) on web, mobile and tablet. Reported inappropriate and irrelevant AI responses, and estimated testing for an 11-feature release (17.5 days).
- **Prinics (Kodak photo printers):** tested the KODAK Photo Printer app on iOS, Android and HarmonyOS, and wrote Python scripts that validated a global sales dashboard against database exports, with 0 mismatches across 3,100+ values.
- **Godrej:** fixed a React UI bug in the Connected Locks web app using AI. A developer reviewed and merged the fix.
- **Godrej:** built a Python and Playwright tracker that pulls 1–4 star reviews from Amazon, the App Store and Play Store twice a day and routes each one to its owner.

**Product testing**

- **Godrej smart locks (2021–present):** owned QA from day one as the product was built from scratch, and launched all four apps with zero production bugs. Tested the full ecosystem across 6 lock models: apps, admin portals, firmware, BLE and remote unlock. Wrote 460+ test cases, ran regression and UAT on every release, and presented RCAs (Bluetooth unlock, app-store release issue) to the client.
- **Other products:** took Simple Energy (EV scooter) and WAYA (stock trading) live under my testing; also signed off Kotak BNPL, Elivaas and Harmony agritech end to end.

## PROJECTS

**QA Factory: multi-agent AI QA pipeline (personal project) | github.com/itstanmaysaxena/qa-factory**

- A Node.js workflow engine, built with Claude Code, that runs 14 Claude agents from requirements to PRD, test cases, and Playwright, Appium and API tests. It uses JSON Schema contracts, budget caps, audit-logged tool calls and GitHub Actions CI.
- Plain-code runners execute the tests: cross-browser Playwright, Appium, API and axe-core. A blind AI reviewer (LLM-as-a-judge) checks the result, and a human approves the release.
- Seeded-fault calibration on a demo app: 16/16 planted bugs caught, 52/52 acceptance criteria covered, 0 flaky tests out of 123. The blind reviewer also caught a false pass.

## LEADERSHIP

- Presented a TestMu AI (LambdaTest) evaluation with a build-versus-buy recommendation and a live LLM test-generation demo.
- Wrote a two-part Playwright handbook (manual coding and AI-assisted) and a 44-slide software-testing training deck.

## EDUCATION

B.Tech | CGPA 7.5/10
